

Ligno-Scanner SD moisture meter

Description:

The Ligno-Scanner SD is a pinless moisture meter for wood with dual depth measuring capabilities at ¼" and ¾".

Wood Moisture Meter:

The Ligno-Scanner SD is calibrated to measure thinner and thicker boards. Ideal when working with different thickness of wood or taking readings at different depth levels to compare surface or core moisture. The ¼" measuring depth works great for stacked veneer and when checking waterborne finishes between applications. It is also ideal to measure the top layer of engineered panels. The ¾" measuring depth is great for hardwood floor installers, inspectors and cabinetmakers because it can be used on finished products where it will leave no pin holes.

This meter has a unique feature that includes 71 species settings or specific gravity settings 0.3-1.0. Lignomat's pinless meter also gives moisture readings in percentage of moisture content. There is an additional reference scale when measuring non-wood building materials that can be used for comparative readings.

Standard Ligno-Scanner SD :

- 1 Ligno-Scanner SD
- 1 carrying pouch with belt loop
- 1 9V battery
- 1 wood group chart
- 1 instruction manual
- 2 year warranty

Features:

- Digital Display
- Rugged design for easy operation
- Wide range wood scale (5-60%)
- Reference Scale for non-wood building materials (0-99)
- Built in corrections for 71 wood groups
- Automatic shut off
- HOLD feature
- ¼" and ¾" measuring depth

Specifications:

Specifications for Ligno-Scanner SD:

Size: 5.5"L X 2"W X 0.5"H

Measurement Range: Wood: 5-60%

Resolution: 0.1 %
